

LUIS SANCHEZ

sanz.luis0@gmail.com | Stockholm, Sweden | luisanz.com

Senior Full-Stack Software Engineer specializing in scalable, event-driven backend systems. My work consistently bridges technical execution with measurable outcomes: contributing to 75–85% YoY growth in digital bookings at Volvo Cars and processing ~50% of all company orders through systems I owned at Airmee.

PROFESSIONAL EXPERIENCE

Senior Software Engineer | Volvo Cars | Jul 2023 - Present

- Built and evolved a Communication Microservice end-to-end using event-driven architecture:
 - Owned the full feature lifecycle: consuming Kafka events to route communication channel, managing localized content via CMS integrations, delivering via SendGrid (email) and Iterable (In-App & Push notifications)
 - Push notification campaigns achieved 8% open rate; In-App campaigns achieved 34%
 - Within the first 6 months of launch (Aug '24–Feb '25), drove 52K digital service bookings through communications — a direct contribution of 260MSEK in revenue
 - Contributed to 75–85% YoY growth in monthly digital bookings; March 2026 delivered 85% uplift vs. prior year, April 2026 delivered 74% — across a 55% wider global audience while holding a stable 22–23% conversion rate
- Integrated CMS platforms for localized content and templates at scale; collaborated with UI/UX designers via Figma to align messaging with design specs
- Transitioned to Android mobile development (Kotlin) over the past two months to directly support an under-resourced team — contributing features end-to-end in a new stack on a short ramp

Senior Software Engineer | Airmee | Mar 2021 - Jul 2023

- Led the design and implementation of a new Amazon integration:
 - Built a microservice in Node.js/TypeScript deployed via AWS Lambda using SQS for event-driven ingestion of high-volume order data
 - Stack included PostgreSQL, Bitbucket Pipelines for CI/CD, Mocha.js for testing, and AWS CloudWatch for monitoring and alerting
 - The amazon.se integration resulted in processing ~50% of all company orders
- Redesigned a large retailer integration, improving scalability and reducing processing timeouts by 70%
- Increased address geocoding accuracy by 60% by implementing a dynamic fallback geocoding service
- Implemented a shared npm library reducing repeated code by 40% across multiple microservices and improving maintainability
- Increased test coverage by 30% with a focus on critical integration paths
- Improved production debugging efficiency by introducing structured logging with granular log levels

Software Engineer | Vivial | May 2018 - Mar 2021

- Led a solo project to build a data migration tool: pulled data from the legacy database, transformed it per new business rules, and inserted it into the new system via efficient API calls — enforcing consistent business logic across the transition
- Improved endpoint security by implementing role-based authorization, increasing data protection and compliance

Software Developer Jr | Vivial | Sep 2015 - May 2018

- Rebuilt the UI of a legacy Windows file-parsing application, eliminating blocking behavior during large record processing and significantly improving user experience
- Fixed bugs on the payment system web app, improving payment response time by 30%

TECHNICAL SKILLS

Languages: TypeScript, Node.js, Kotlin, C#, SQL, GraphQL, Python

Databases & Infrastructure: PostgreSQL, Kafka, ElasticSearch, AWS (Lambda, SQS, CloudWatch), Azure, Kubernetes

Frontend: React, TypeScript

AI Tools: Gemini LLM, GitHub Copilot, Cursor, Claude Code

EDUCATION

Master's Degree, E-Commerce | APEC University | 2020

Bachelor's Degree, Information Systems Engineering | APEC University | 2015
